

TANGENCY

Visual Arts Department
CPI Plurilingüe Cabo da Area. Laxe

**We are going to draw a group of
consecutive tangents arcs**

First- Draw a segment AB

Second

Determine the perpendicular bisector of the segment AB and pick a point O1 which is going to be the first arc's centre.

O1

Third

**Draw the arc from A to B
(segment's endpoints)
you can always choose
the arc above or below
the segment.**

**In this particular case we'll
take it under in order not
to get it out of the sheet.**

Fourth

Draw a line that joints the first arc's centre with the endpoint

Choose a point (O2) that belongs to that line. This point is going to be the second centre

Fifth

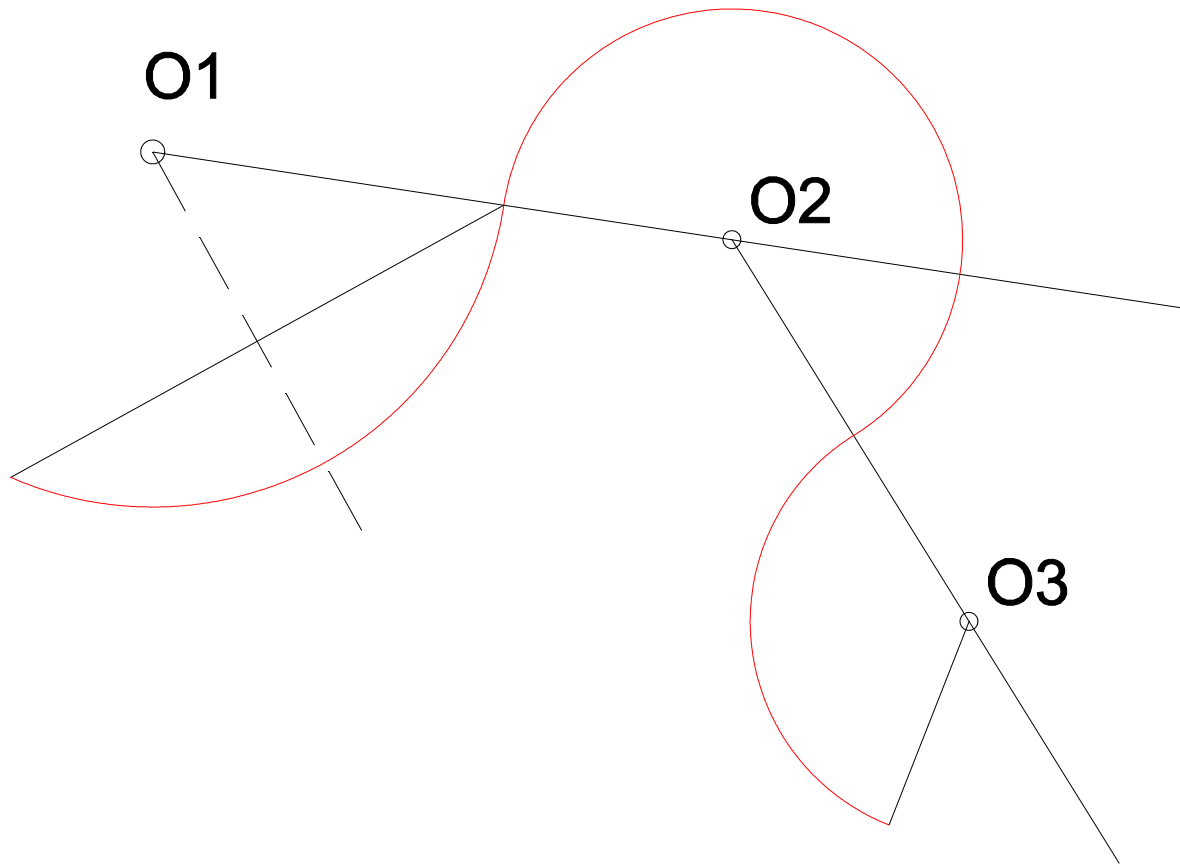

**Draw the second arc
From the endpoint to
wherever you want to
stop.**

Sixth

**Draw a new line that
joins O2 with the new
arc's endpoint**

**Pick the next centre O3
on that line**

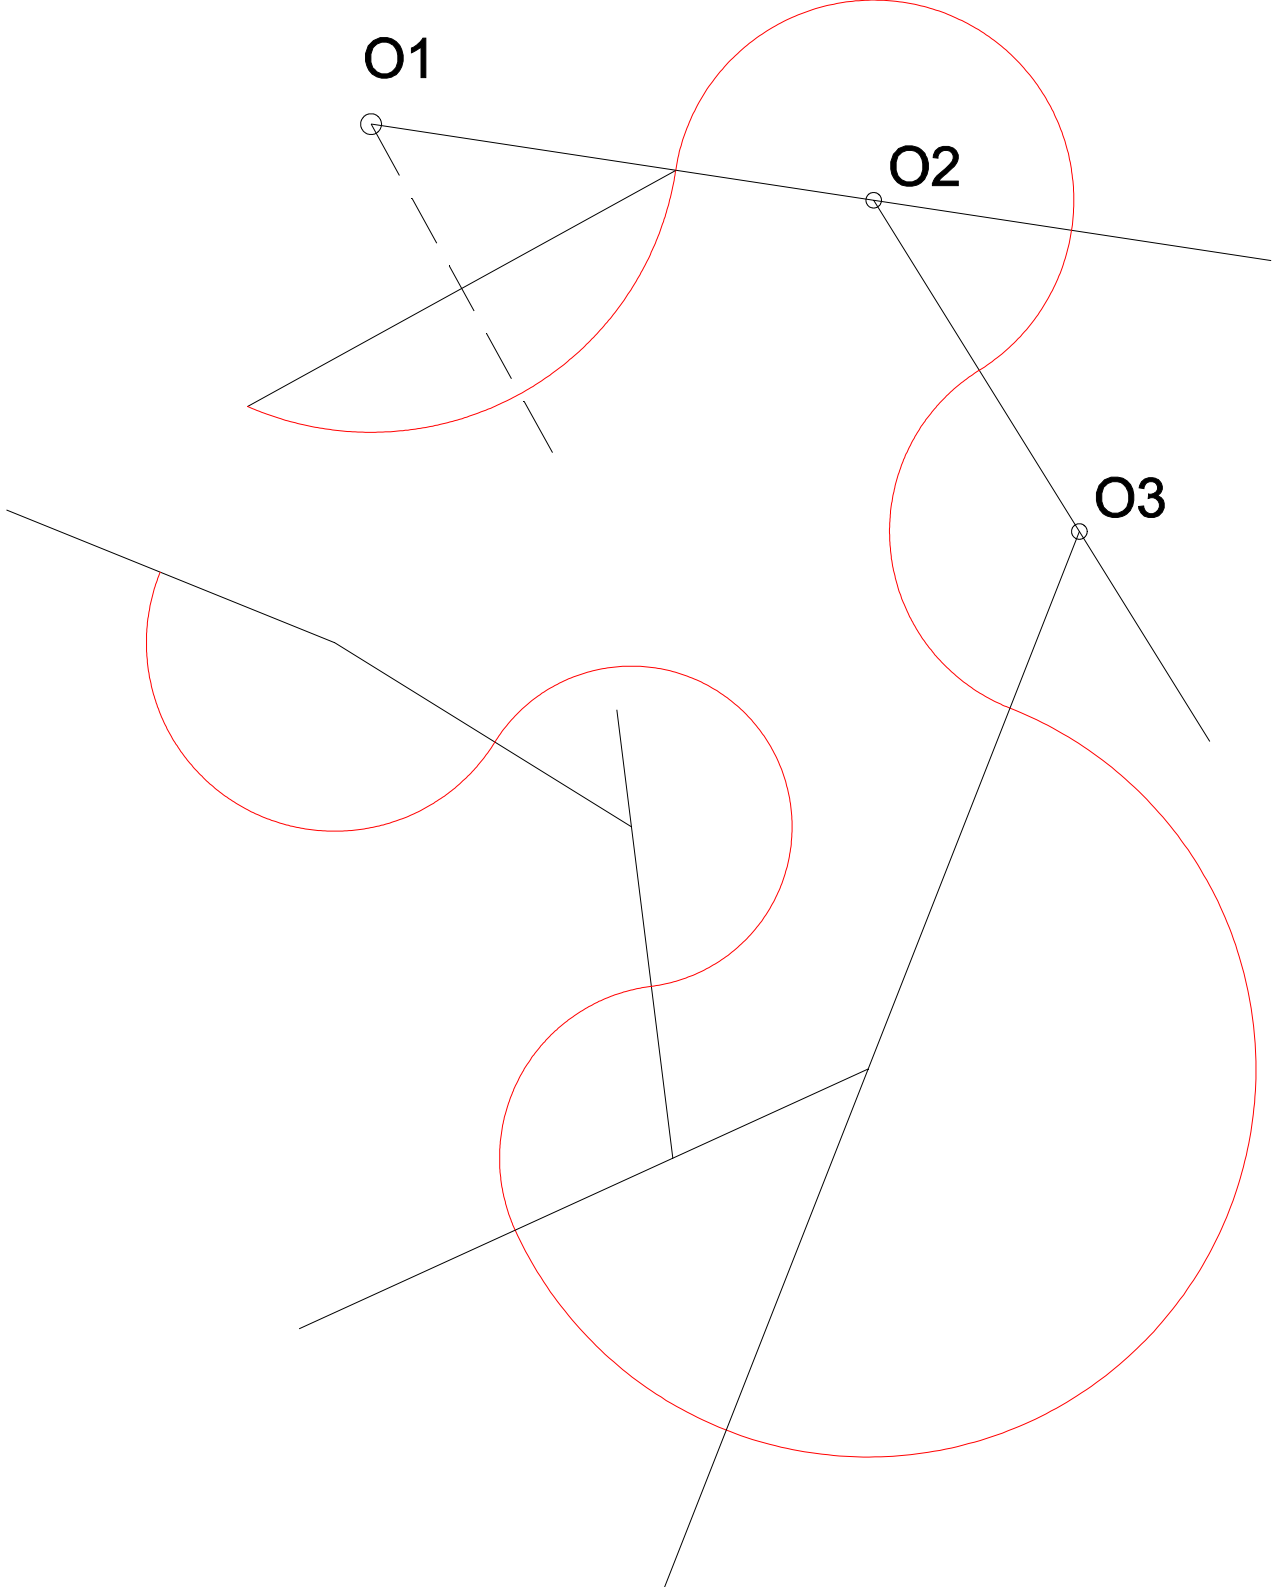

Seventh

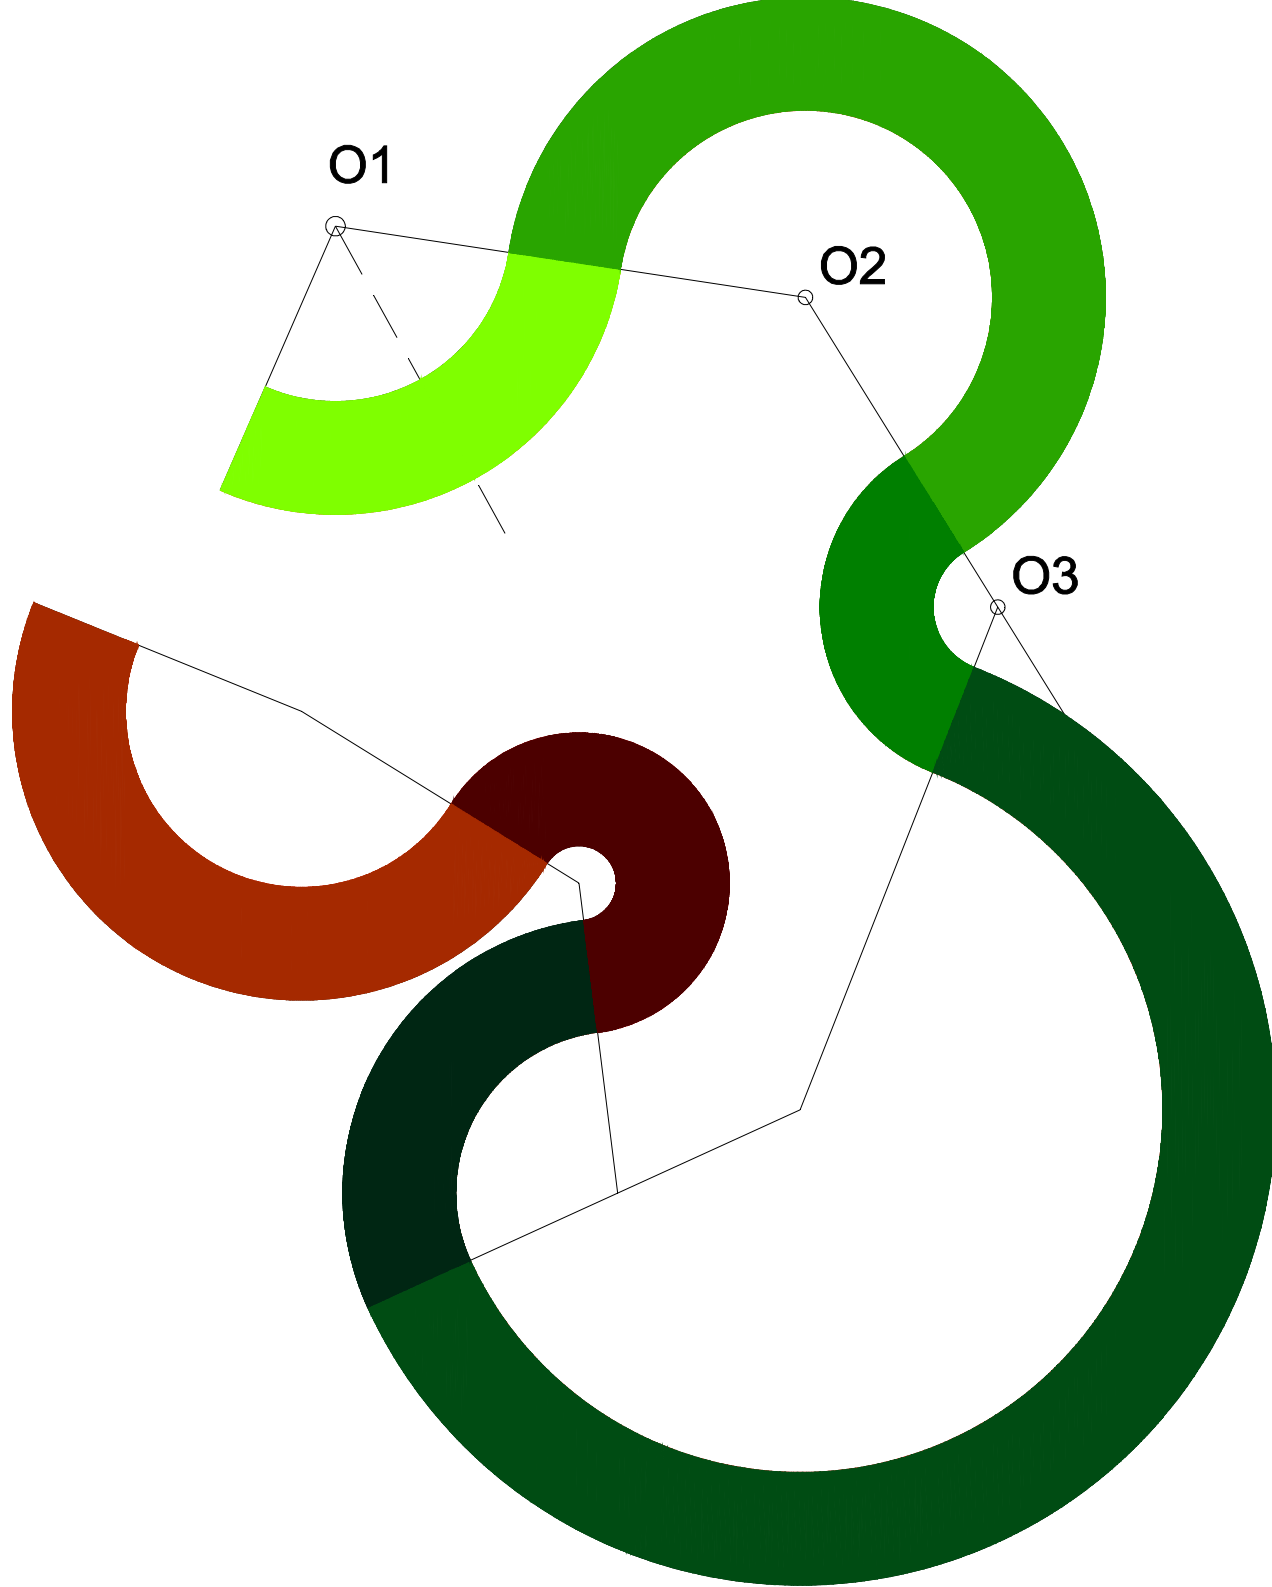

**Draw a new line that
joins O2 with the new
arc's endpoint**

**Pick the next centre O3
on that line**

And so on

**If you go on drawing
tangent arcs you will
get a nice design that
can be finished with
colours or/and
patterns**

Create a design
based on this method

Examples
