### **TEXT 1**

Michael Schumacher was 50 on 3 January 2019. His physical condition remains a mystery to those outside his personal circle, following the skiing accident in December 2013 which left him with severe brain injuries. He has not been seen in public since 2014. But the memory of what Schumacher achieved in Formula 1 in the course of a career that spanned 21 years is indelible. Apart from his records of seven world titles and 91 wins, Schumacher changed the sport forever. As a driver, Michael took Formula 1 to a new level with his attention to detail, his technical knowledge and physical preparation.

There had always been doubts about his first title with Benetton in 1994, given the highly controversial nature of that year's competition. Illegal driving aids were found in the car, but Benetton was not punished because the governing body (FIA) said they could find no proof they had been used. Then, people began to question the dominant Ferrari era of the early 2000s, when Schumacher won five titles. They started to wonder how much of an advantage he had had. Ferrari was the richest team and they had unlimited resources. Did this mean Schumacher was not as good as he had looked?

There was a dark side to Schumacher, and it was never far away. Schumacher often seemed to act without morals, and to be prepared to do literally anything to win. The sporting personification of Machiavelli's prince.

A human machine, a force of nature, a sportsman who raised standards in his chosen arena and carved himself a place in sporting immortality. The complexity of his legacy just makes him all the more interesting. Whether Schumacher's records are broken or not, whether or not he recovers from his accident sufficiently to re-enter public life, he will forever remain one of the greatest F1 drivers there has ever been.

### TEXT 2

I ask a teenage girl, "how often do you text?" "250 times a day, or something", she tells me. Shocking! The digital lives of teenagers have become the target of weekly attacks. In a recent essay for the Guardian, the novelist J. Franzen bemoaned online socialising, arguing that it was creating a uniquely shallow and trivial culture, making kids unable to socialise face to face.

As a parent of two boys at primary school, I'm not immune to worry about these issues. That trend is real. Is it turning kids into emoticon-addled zombies, unable to connect, to form a coherent thought or even make eye contact? Could this be true?

I don't think so. New technologies always provoke generational panic, which usually has more to do with adult fears than with the lives of teenagers. In the 1930s, parents were anxious about the radio gaining "an invincible hold of their children". In the 80s, the great danger was the Sony Walkman – producing the teenager who "throbs with orgasmic rhythms", as philosopher Allan Bloom claimed. When you look at today's digital activity, the facts are much more positive than you might expect.

Indeed, social scientists who study young people have found that their use of digital technology can be inventive and even beneficial. This is true not just in terms of their social lives, but of their education too. So if you constantly use the social media, will you become unable, or unwilling, to engage in face-to-face contact? The evidence suggests not.

So what's the best way to cope? The same boring old advice that applies to everything in parenting: Moderation. It's the key to model good behaviour. Parents who stare non-stop at their phones and don't read books are likely to breed kids who will do the same. As ever, we ought to scrutinise our own behaviour.
